

# Project Case Study

## Waitsia Stage 1 Expansion - SMP Works

End User	Mitsui E&P Australia
Client	Enscope
Location	Dongara, Western Australia
Market Sector	Oil and Gas

### Scope of Work:

Alltype Engineering was contracted to supply, fabricate and construct SMP services for the construction of the Xyris processing facility near Dongara.

The scope of works for this project included Process piping and Tank fabrication. Fabricate items were then transported to site for installation.

All works were carried out safely and without incident, and also with no impact to the project schedule.

This achievement is a credit to all the people from Alltype Engineering and our subcontractor partners who had been involved in the project, during a global pandemic crisis to deliver the project in a tight schedule with zero first aid or loss time injuries.
