

# Project Case Study

## Waitsia Inlet Meter Station – CSMPEI Construction

End User	Mitsui E&P Australia
Client	Australian Gas and Infrastructure Group (AGIG)
Location	Dongara, Western Australia
Market Sector	Oil and Gas

### Scope of Work:

Alltype Engineering was contracted by AGIG to construct Waitsia Inlet Meter Station.

The scope of works for this project included bulk earthworks, civil and concrete works, offsite skid fabrication & SMPEI assembly works (including FAT testing). Installation of the prefabricated skids onsite with corresponding SMP installation and E&I site construction works completed the station connection to the DBP.

The Waitsia Inlet Meter Station Project was delivered safely, on time and budget. This achievement is a credit to all the people from Alltype Engineering and our subcontractor partners who had been involved in the project, during a global pandemic crisis to deliver the project in an tight schedule with over 5,000 onsite man hours with zero first aid or loss time injuries.
